Climate Seal™ Window Inserts Help SOLVE Heavy Traffic Noise Problem!

To whom it may concern:

I recently contacted Acoustical Surfaces, Inc. because I live on a busy road next to an industrial park and sound from the passing trucks was disturbing my sleep and comfort in my home. I had the privilege of speaking to Ted Weidman and explained the issue to him. He asked me many questions to help figure out the best product they offer for my situation instead of just being an "order taker" which gave me the added confidence in his skills. He recommended Climate Seal windows in the ¼ inch thickness for my personal situation. I am a very technical person and he was patient and answered all my questions. After ordering the inserts, Acoustical Surfaces kept me in the loop on where they were in transit all the way until they were delivered.

The installation was very easy as Ted gave me step-by-step instructions on how to complete it. I am by far not a handyman, so the fact that I was able to install them so easily, shows me that anyone can do it. They decreased the sound of cars and low frequency noise, and that really makes it much more comfortable in my home.

The main reason I bought the window inserts was for noise reduction. I've had them for 4 months now, and the cooler season has arrived. Fall and winter are a much colder time of year here, so in addition to the noise reduction they also have had the added benefit of helping keep my house at a much more constant temperature. I'm not using nearly as much heat as I have in the past, and I think in the long run they are going to actually pay for themselves.

I would highly recommend this Climate Seal product from Acoustical Surfaces to anyone who is looking for noise reduction or to lower heating and cooling costs in their home.

*Sincerely,
Ben S.*
